

HTML:

- A markup language used to create & design webpage.
  - It is webpage layout language.
  - It is a set of tags/rules that defined how the content will display.
  - It is Developed by Tim Berners Lee in 1990 at CERN.
- 

History of HTML:

first version	HTML	in 1991
	HTML+	1993
	HTML 2.0	1995
	HTML 3.2	1997
	HTML 4.01	1999
	XHTML	2000
	HTML5	2012

---

Tag - An HTML command enclosed in angular brackets  $\langle \rangle$  that tell the web browser how a content to be displayed.

Element - A combination of opening tag, closing tag & the content.

Attribute → special keywords to provide additional information that change default behavior of a tag.

## Structure of Tag :

- Every tag contains a tagname enclosed in angular bracket
- Tag name is followed by one or more optional attributes.
- closing tag is defined by  $\langle / \rangle$

$\langle$  Tagname attribute = "value"  $\rangle$

$\langle /$  Tagname  $\rangle$

e.g.

opening Tag  $\langle$  Body bgcolor = "red"  $\rangle$

Tag Name

$\langle /$  Body  $\rangle$

closing Tag.

Element e.g.

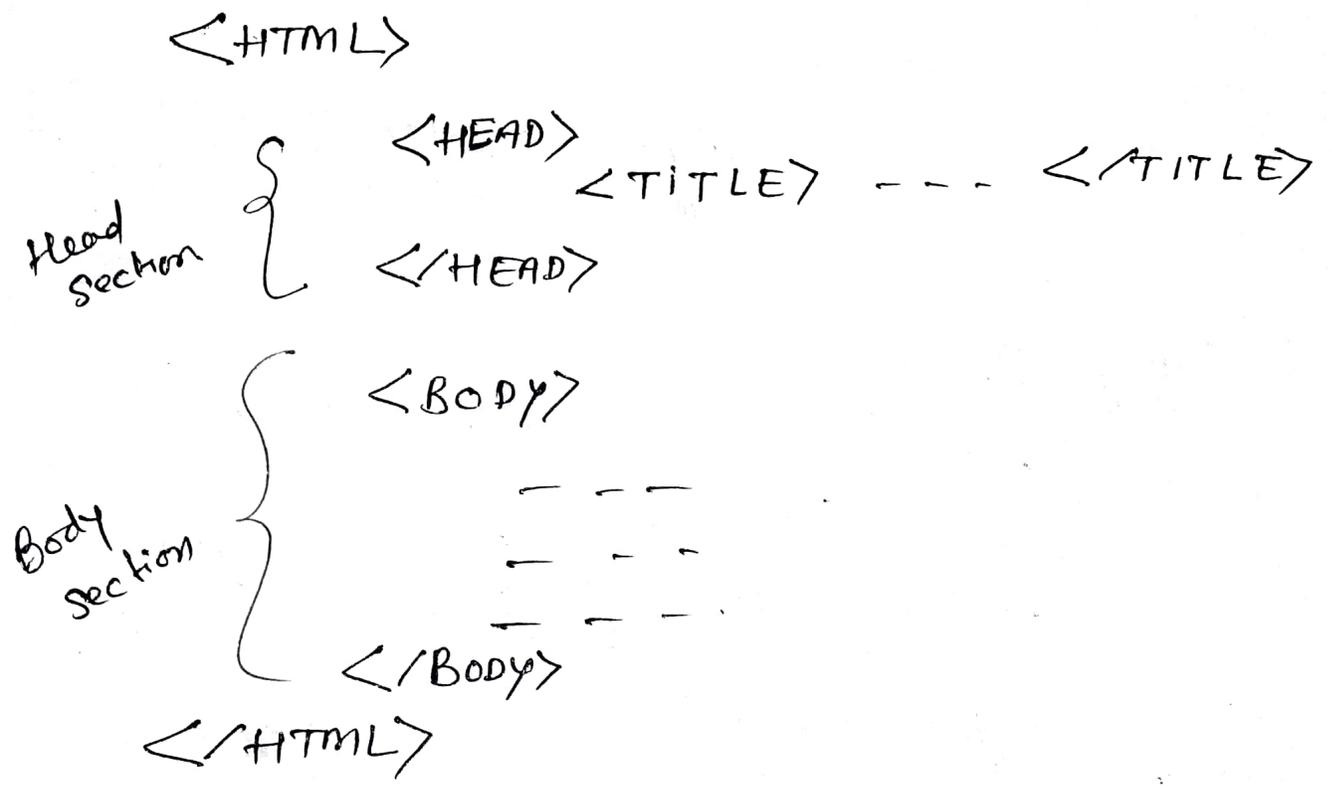

opening Tag  $\langle$  H1 Sample Text  $\langle /$  H1  $\rangle$  closing Tag.

# Structure of HTML Document ;

An HTML Document is divided into 2 parts.

- ① Head section
- ② Body section

## Structure.

### Head Section →

- Head section is created by using <HEAD> tag
- It contains information about document such as Title, script, style information etc.

### Body Section

- It is the second largest part of HTML Document
- It contains all the content to be displayed in browser.
- It is created by using <BODY> tag.

## Type of Element / Tag

There are two types of HTML ~~Document~~ <sup>Tag or</sup> Element

### Container Tag

- A tag that have opening Tag as well as closing Tag is called Container Tag.

e.g. `<HEAD>`, `<HTML>`, `<BODY>` etc.  
`</HEAD>`, `</HTML>`, `</BODY>`

### Empty Tags.

- A Tag that do not have closing Tag is called empty Tag.
- They do not contain anything.

e.g. `<img>`, `<br>`, `<hr>` etc.

Note:

Empty Tag can be defined as —

- use only open tag → `<Tagname>`
- use open & close → `<Tagname> </Tagname>`  
Tag without content
- Selfclosing Tag → `<Tagname />`

} All are the ways to represent empty tags.

# Document structure in HTML5

5

```
<!DOCTYPE html>
<HTML lang="en">
  <HEAD>
    <TITLE> ..... </TITLE>
    <META charset="utf-8">
  </HEAD>
  <BODY>
    .....
  </BODY>
</HTML>
```

- DOCTYPE Declaration must be at top of HTML Document
- DOCTYPE Tells browser - version of HTML Document

## <HTML>

- It is the Top level tag of HTML Document.
- It define document as an HTML document.

### Attribute :

lang - to define language of HTML document ie. lang="en" for english.

dir - to define direction of text in webpage.

possible values →

ltr for left to right  
rtl for right to left

## <meta> charset

<meta>Tag charset attribute is used to define character encoding scheme used for webpage.

## <HEAD> Tag :

- \* It is a container tag.
- \* It is used to create Head section of HTML document.
- \* It contains - Title of webpage.
  - script information.
  - stylesheet information.
  - information about author,
  - keywords.

## <TITLE> Tag :

- \* It is used to provide title of webpage.
- \* Title is displayed on title bar of web browser.
- \* This tag always used inside <Head> section.

Note :

<HTML> , <HEAD> , <BODY> , <TITLE>  
are structural tags as they appears only  
once in a webpage.
